

TO WHOM IT MAY CONCERN

REACH and its impact on the product range of HOFFMANN MINERAL

Gloxil iM16k A, Gloxil iM16k MAM

All these grades because of their physical characteristics are considered article according to **REACH Directive** (EC No. 1907/2006 in its latest version). They are, therefore, **exempt from the obligation to be registered.**

In summary, based on present knowledge, it can safely be stated that the standard product range of HOFFMANN MINERAL in its entirety is not subject to any obligation of registration under the REACH Directive, and even beyond that there **do not exist any other apparent marketing limitations - no content of SVHC-Substances** based on the latest Candidate List and **no content of pbt/vPvB substances** – are detectable.

With respect to the chemical reagents used, we engage ourselves to exclusively make use of products which are registered and approved under REACH.

For further information about these subjects, you are invited to contact our department of product safety by phone +49 8431 53 374
or by e-mail: erp@hoffmann-mineral.com.
